csakre634@gmail.com · +91 95377 46770 · [LinkedIn](#) · [GitHub](#) · [Portfolio](#) · Rajkot, Gujarat, India

SUMMARY

Backend-focused web developer with hands-on experience building production-grade applications using Node.js, Express, and MongoDB. Specialized in REST API design, JWT authentication, real-time communication via Socket.IO, and scalable database architecture. Comfortable across the full stack with React, and passionate about clean, modular backend systems.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), Python, SQL, C#
Frontend	React.js, Redux Toolkit, HTML5, CSS3, Tailwind CSS, Bootstrap
Backend	Node.js, Express.js, REST APIs, JWT Authentication, OAuth 2.0, Socket.IO
Database	MongoDB, Mongoose, MySQL, SQL Server
Tools	Git, GitHub, Postman, Cloudinary, Vercel, Render, VS Code

PROJECTS

OUTFY – Full-Stack E-Commerce Platform | React 19 - Express 5 - MongoDB

[Live Demo](#) | [GitHub](#)

- Implemented brute-force protection by **auto-locking** a user account after 5 failed login attempts for 15 minutes, reducing the risk of credential-stuffing attacks on the login endpoint.
- Implemented secure routing with **JWT-protected middleware** separating public, user-authenticated, and admin-only routes.
- Mitigated brute-force login attempts and payment tampering by combining **bcrypt + pepper hashing**, **tiered rate limiting**, and **HMAC-SHA256** signature verification.
- Eliminated cart loss on login a common e-commerce UX gap by building a dual-mode cart (**localStorage** for guests, **MongoDB-persisted** for authenticated users) synced transparently through **Context API**.

ChatterBOX – Social Media Platform | Node.js - Express - MongoDB - React - Socket.IO

[Live Demo](#) | [GitHub](#)

- Architected a full-stack social platform with modular **MVC backend** follow/request system, post feed, real-time notifications, and in-app messaging.
- Implemented **JWT-based auth** with protected routes, **Bcrypt password hashing**, and token refresh logic, following standard security practices.
- Built real-time features using **Socket.IO**: live notifications on follow/like events and request-based private chat between users.
- Integrated **Cloudinary** for image upload/storage with Multer middleware; designed structured MongoDB schemas with population queries.

Vehicle Service Booking System | ASP.NET - SQL Server

Academic Project

- Built admin/user booking lifecycle management with role-based access, CRUD operations, and a normalized SQL schema with structured service categories.

EDUCATION

Bachelor of Computer Applications (BCA) RK University, Rajkot

2023-2026

Specialization: Web Development

CGPA 7.69/ 10

ITI – Computer Operator and Programming Assistant (COPA)

Govt. ITI, Rajkot | 2021–2022

ACHIEVEMENTS & LEARNING

- Built and deployed multiple full-stack applications using React, Node.js, Express.js, and MongoDB.
- Active GitHub contributor with production-ready personal projects.
